How to install the ScriptBay Addon for Dokky php Script

The last **Official Add-on of Dokky Bookcase Script** regards the possibility to add "[ScriptBay](#)" in your website for viewing and sharing of online documents.

The package in the **official Shop** naturally includes the necessary instructions, which we also want to report on our Help Desk. We remind you that [ScriptBay - Advanced eBay EPN Search](#) uses its own files to manage requests via API, but in this specific case, it has some files in common with [Dokky Bookcase Script](#):

- Files in common -

.htaccess
.header.php
.global.php

The installation is very simple, but we **strongly suggest**, to create a backup copy of your "**global.php**" file , or to rename it, in case you need to recover the previous access data to the database and emails.

Once this is done, you can safely **load and overwrite all files**, which are present in the "**ScriptBay for Dokky**" package in the root/folder or subdomain of your Dokky Bookcase Script installation.

The last step, **fill in the new "global.php" file with the required data** , adding your EPN affiliate code, standard search keywords and campaign name.

Dokky and ScriptBay are now ready to interact with your Users!
